

INJECTSTREAM

Injection Well Chemicals

Chemstream specializes in chemicals and services which support the injection well industry. Our experienced representatives can conduct a no cost, no obligation audit of your salt water disposal well system and determine when chemical treatment would:

- Improve system cleanliness
- Protect formation permeability
- Increase capture of free and emulsified oils
- Enhance the injection profile
- Reduce pumping pressure and time periods.

With the results from Chemstream's detailed lab analyses, we can offer the following products:

- **Scale Inhibitor**
- **Microbiological Control**
- **Gel Breakers**
- **Corrosion Inhibitors**
- **Microemulsions/Solvents**
- **Clay Stabilizers**

Once implemented, Chemstream's programs include services to train operators and conduct water evaluations to confirm chemical selection, feed points, and loadings. We recommend mechanical improvements to minimize filter change outs and allow your system to operate at a lower pressure.

Contact us today for a free site evaluation, or more information on how we can meet your specific needs.
