

STIMSTREAM FR 9500 FRICTION REDUCER

StimSTREAM FR 9500 is a very high molecular weight synthetic anionic polyacrylamide designed to provide optimal FR when reusing moderate ratios of production brine as a frac water source. The **StimSTREAM FR 9500** copolymer rapidly inverts and provides superior friction reduction.

Dosage

Chemstream's **StimSTREAM FR 9500** is effective at dosages ranging between 0.3 – 1.25 GPT even when moderate brine is employed as the frac water source. Chemstream will conduct FR loop testing on the water source to confirm actual dosage requirements.

Benefits

- Provides optimal FR in moderate or fresh frac water quality
- Cost/effective economics
- Homogeneous with all anionic and non-ionic frac fluids
- Completely soluble
- Environmentally responsible
- Safe to handle

Compatibility

StimSTREAM FR 9500 is compatible with all anionic and non-ionic frac fluid chemistries, can be mixed directly into the frac blender tub or manifold system.

Handling/Storage

Store in a cool, dry, well ventilated and shaded area, away from heat sources and incompatible materials. To maintain product quality, store product at temperatures below 104°F (40°C). Refer to the Safety Data Sheet (SDS) for handling and hazard data.

Physical Properties

Appearance Viscous liquid milky
Odor..... Aliphatic
Product Density9.17lbs./gal.
Freezing Point..... < 22°F
pH (neat).....3 - 6
Solubilitysoluble with a rise in viscosity
Chemical Family.....Polyacrylamide

Ordering Information

Available in totes, bulk or Isotainers. Contact information is below.
