

FOR IMMEDIATE RELEASE

Chemstream Expands Operation at Williston, North Dakota Facility to Meet Regional Demand

Williston, ND — Chemstream, a leader in specialty chemical manufacturing and innovative solutions, is proud to announce a significant expansion at its Williston, North Dakota facility. This strategic investment enables Chemstream to blend its own biocide and scale control products, marking an important milestone in the company's growth and commitment to addressing the unique needs of the region.

The Williston facility, which opened last year, now includes specialized equipment for biocide and scale control blending. This achievement required significant investment in state-of-the-art equipment and close collaboration with regulatory agencies to meet stringent requirements for handling regulated chemicals.

"We identified a gap in the market in this region and saw an opportunity to better serve our customers with high-quality, cost-effective biocide solutions," said Jesse Krieg, Vice President of Oil and Gas. "By expanding our capabilities here, we are not only strengthening our operations but also making a meaningful impact in a challenging area often overlooked by competitors."

The expanded blending capabilities allow Chemstream to streamline its supply chain and improve efficiency, delivering value to customers in North Dakota and surrounding areas. In addition to the new blending operations, Chemstream's Williston facility continues to serve as a critical base for equipment and distribution, solidifying its role as a regional leader.

Operations at the enhanced facility are expected to commence shortly, reinforcing Chemstream's ability to meet the growing demand for its biocide products and other specialty chemicals in the region.

About Chemstream

Established in 1997, Chemstream, Inc. is a nationwide leading chemical company. With locations across the country in Pennsylvania, Illinois, North Dakota, Ohio, Texas, and West Virginia, Chemstream is equipped to provide customizable chemical solutions for industrial water treatment, oil & gas, mining, manufacturing, and much more.
